

# KumoScale Grafana Dashboards Overview

Grafana™, Prometheus™ and Loki™ are de facto standards for monitoring data center infrastructure. This guide describes the Grafana™ dashboards included in your KumoScale™ cluster.

## Before you Begin

- The dashboards are available via the the KumoScale cluster virtual IP (VIP) address. You will need a computer that is on the same subnet as the KumoScale cluster. For example, the remote host used during the KumoScale software installation can be used.
- The Grafana dashboards are accessed using a web browser. Information about compatible browsers can be found [here](#).

## Intended Audience

This document is written for users of the KumoScale Storage System. It is assumed that the reader has a working knowledge of KumoScale storage system.
